

To Whom It May Concern,

Century Container, LLC produces many rigid open head pails and covers manufactured from durable, high-density polyethylene (HDPE). We offer products that comply with US FDA protocols and with the US FDA guidelines under 21 CFR 177.1520 (c) 3.2 (a). We also offer products that are produced from constituents listed in Commission Regulation (EU) No. 10/2011 on plastic materials and articles intended to come into contact with food. For full compliance, an overall migration limit of 10 mg/dm² and specific migration limits (SML) apply to the final article intended to come in contact with food. Our products meet the requirements of Framework Regulation (EC) No. 1935/2004 of The European Parliament and of The Council of 27 October 2004, on materials and articles intended to come in contact with food and repealing Directives 80/590/EEC.

Our high-density polyethylene (HDPE) resin used in the manufacturing processes has no Bisphenol A (BPA) or phthalates. Regulated metals – lead, antimony, arsenic, mercury, chromium, selenium, barium, and cadmium – were not intentionally added to any package or packaging component during the manufacturing process. The sum of the incidental concentration levels of lead, antimony, arsenic, mercury, chromium, selenium, barium, and cadmium present in any package component does not exceed 100 parts per million (0.01%) by weight. Chlorinated materials were not intentionally added to any package or packaging component during the manufacturing process.

The HDPE resin contains no known chemicals regulated under SARA 302/304 and 313, or California's Proposition 65.

This assurance is given based on similar assurances and representations of our raw material suppliers, and in the event that we receive any information to the contrary, you will be immediately notified.

If you have any questions or should require additional information, please feel free to contact either myself or any of our Sales Staff.

Respectfully,

Mark Brothers
President
